## DETAILED ACTION

### *Double Patenting*

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the "right to exclude" granted by a patent and to prevent possible harassment by multiple assignees. See *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and, *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent is shown to be commonly owned with this application. See 37 CFR 1.130(b).

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 18 and 20-24 are provisionally rejected under the judicially created doctrine of obviousness-type double patenting as being unpatentable over claims 31, 32, 36, 37, 39 and 40, respectively, of copending Application No. 09/819,864. Although the conflicting claims are not identical, they are not patentably distinct from each other because of their variations in wordings.

This is a provisional obviousness-type double patenting rejection because the conflicting claims have not in fact been patented.

### ***Claim Rejections - 35 USC § 102***

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2631

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

4. Claims 1-24 are rejected under 35 U.S.C. 102(e) as being anticipated by Van Nee (6,175,550).

Regarding claims 1-6, 8-20, and 22-24, Van Nee teaches QAM communication systems (figure 5) comprising transceivers (72, and 74) including transmitters (10, figure 1) and receivers (30, figure 4) wherein the systems can dynamically scale the operating parameters and/or characteristics such as constellation size, bandwidth (spectral allocation), etc... so that optimum performance can be achieved. See column 2, lines 60-66; column 3, lines 3-21 and lines 59-65; column 4, lines 3-17 and lines 31-43; column 7, line 40 to column 8, line 29; column 9, lines 24-42; and column 10, lines 17-33. Note that, the number of carriers can also be scaled so that the system can also communicate using a single carrier. Column 8, lines 19-24.

Regarding claims 5, 7, 11, Van Nee further teaches optimizing the S/N ratio. Column 4, lines 31-43.

Regarding claim 21, Van Nee further teaches scaling the parameters and/or characteristics for the upstream and downstream links. Column, 8, lines 40-47.

***Conclusion***

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Reference Ojard (6,327,311) is cited because it is pertinent to QAM single carrier communication system.
